Source: BethesdaBest's answer: As of right now, the only way to get Doom Eternal is a pulsating metal soundtrack would be if you pre-ordered the Doom Eternal Collector's Edition. This amazing (and expensive) package includes high-quality lossless digital soundtracks for both Doom 2016 and Doom Eternal. Unfortunately, you won't get it on the day of release. Composer Mick Gordon is back after his award-winning performance at Doom 2016. This now infamous soundtrack has caught your eardrums and aggressively dragged you into the game, providing the perfect backdrop on which you can tear demons into small pieces with your bare hands. The doom Eternal soundtrack could be even better. Gordon brought a bunch of talented metal singers from different backgrounds to bring the metal chorus to Doom, making the soundtrack more engaging and sinister than ever. If you're one of the dedicated fans who pre-ordered the Doom Eternal Collector's Edition, you'll get high-quality soundtracks that are included for both the first and the doom sequels. This means lossless digital songs, so you won't lose a single note no matter what device you're listening to. For the rest of us, we'll have to be happy with

getting our Doom fixed elsewhere. The doom Eternal soundtrack didn't show its face in the official feature on all platforms like Spotify or YouTube Music, but we'd be shocked if it never happened after the launch of Doom Eternal. It's important to note that even those who pre-ordered Doom Eternal's Collector's Edition won't immediately get an official soundtrack on the day of release - 20. The reason was not provided, although Bethesda said lossless digital soundtracks for Doom 2016 and Doom Eternal will be provided in the future. The company also said it would let players know when they would be available. If you just can't wait to get your Doom fix, there's a pretty amazing playlist for Doom Eternal on Spotify that includes 89 songs from Mick Gordon and other talented bands and artists. The playlist should provide the perfect makeshift until the soundtrack is available in an official capacity. We will update this space as soon as we have more information. Doom Eternal is another frenetic iteration in the long-running series. The game, due to launch this month, aims to bring even faster action to consoles and computers with new enemies, multiplayer and more modes. Now with all the add-ons you get not only a campaign and Battlemode, but also a copy of Doom 64, Year One Pass, campaign add-ons, skins and more. We can earn a commission for purchases using our links. Teach more. In general, the release of the soundtrack game (Original Soundtrack) is quite quiet, however DOOM Eternal had some conflicts over its 59-track OST. This was due to a disagreement between publisher Bethesda and the composer over the quality of part of the music created for the new title. It all started last month (April), when the album OST doom Eternal was released (after a few delays). Fans of the series began to notice that several songs sounded smooth, without the dynamics of sound, compared to DOOM songs (2016). In reading these complaints, Mick Gordon quickly took his blame for this fact publicly, through a post on the social network Twitter. Here's a comparison between the original BFG division from Doom's Official Soundtrack 2016 (left) vs. BFG 2020 remix on Eternal's soundtrack from today (right). Notice how wavelengths in the BFG 2020 make up an almost perfectly straight bar vs. the original with multiple definitions of pic.twitter.com/TCJRdOe1Yf – Doominal Crossing: Eternal Horizons ????? (@thatACDCguy) April 19, 2020, I didn't mix them up and I wouldn't do it. You will be able to spot a small handful of tracks I mixed (Meathook, Command and Control, etc...) — Mick Gordon (@Mick\_Gordon) April 19, 2020 I did not mix them and I would not do so. You can identify small tracks I mixed (Meathook, command and control, etc...) The difference between doom soundtrack music (2016) and doom eternal music. Source: Twitter But Mick Gordon's derogatory words about the DOOM soundtrack can be found until January, at which point the comments on YouTube say: Curious fact: these are all silly changes to the time of signing. This is the result of someone from marketing putting together music without musical knowledge. The complaints continued for several weeks, to the point where there were direct and personal attacks against the main sound designer of iD Software, Chad Mossholder, a name that appeared on the tracks where there were complaints about quality. In defense of Chat, and the entire process of creating the game soundtrack, iD Software Doom Eternal producer Marty Stratton decided to write a text showing the studio side and details of why Mick Gordon's collaboration was limited in creating OST. It's a rather thorough report showing that the release of the soundtrack was delayed several times due to Mick's inability to send songs on time, which is why the music producer agreed to work with Chad to speed up the music making process and ensure that the songs were in time. It is even reported that Mick says he was upset that Chad was considered a co-songwriter when in fact he was quoted as a collaborative artist, to show fans that not all of the songs were written by Mick Gordon. Check out the main section of the text posted by Marty Stratton on Reddit below: At last year's E3, we announced that OST will be included in the DOOM Eternal Collector's Edition (CE) version of the game. At the time we didn't have Mick under contract for OST and due to ongoing issues in receiving the music needed for the game, we didn't want to add to the distraction at the time. After discussions with Mick in January this year, we reached a general agreement on the conditions for delivery at the beginning of March - in time to meet the consumer's commitment to include digital OST in DOOM Eternal CE at launch. The terms of the OST contract with Mick were similar to the DOOM contract (2016) because they required him to deliver a minimum of 12 tracks, but added bonuses for timely delivery. The agreement also gives him complete creative control over what he brings. On February 24, Mick contacted him to tell him that he and his team were fine with the terms of the contract, but that there was much more work than expected, a lot of content to go through, and that while it was progressing, it took longer than expected. He apologized and asked that he ideally get another four weeks to put it all together. He offered that extra time would allow him to provide more than 30 songs and run for two hours – including all the songs in the game, arranged in soundtrack format and, as he thought, would best represent the score in the best possible way. Mick's request was granted, allowing for an even longer extension of almost six weeks - with a new delivery date in mid-April. In this communication, we noted that we understand that it needs more time to ensure that OST has met its bar quality and even changed the bonus payment for accurate delivery to cope with the new data so that it can still get the total refund it could. In early March, we announced via Twitter that the ost component in DOOM Eternal CE was delayed and would not be available as originally planned. On this point, it is important to note that not only are we disappointed that we did not deliver the OST with the launch of the EC, but we must also be aware of consumer protection laws in many countries that allow customers to claim a full refund of a product if one product is not delivered on the day of advertised availability. Even with that delivery in mid-April it would allow us to meet our obligations to customers as well as allow Mick the time he ideally demanded. When we got to April, we became increasingly worried that Mick would OST in time. I personally asked our Head Audio Designer id, Chad, to start working on id versions of the tracks – a backup plan that Mick can't deliver on time. To complete this, Chad will have to take all the songs Mick delivered to the game, edit the pieces into tracks and organize these tracks into complex OST. It is important to note that there is a difference between mixed music for inclusion in the game and mixed music for inclusion in OST. Several people noticed this difference when observing the course, but they misunderstood why there is a difference. When a song looks bricked or like a bar where the extreme ups and downs of a dynamic track are cut, that's how we get Mick's music for inclusion in the game – in pre-mixed and pre-compressed fragments of it. Music fragments supplied then enter our audio system and are combined in real time while you play the game. Alternatively, when mixing and mastering for OST, Mick starts with his source material (which we normally don't have access to) and re-blends to OST to ensure that the ups and downs are not cut – as seen in his 12 OST tracks. All this is important to note because Chad only had these fragments of pre-mixed and pre-compressed games from Mick working on editing id versions of the tracks. He simply edited the same song you're listening to in the game to create a complex OST - although some editions needed minor volume adjustments to avoid further snigs. Marty completes his text by saying that iD Software will no longer work with Mick Gordon on the next Doom Eternal DLC while wishing the best for his future. In terms of the immediate future, we are on the move forward and we will not be working with Mick on the DLC that we currently have in production. As I mentioned earlier, his music is amazing, he is a rare talent, and I hope he wins many awards for his contribution to DOOM Eternal at the end of the year. I'm as disappointed as anyone right now, but as we've done many times, we'll adapt to new circumstances and watch the most exclusive and talented artists in the industry work together. Our team has enjoyed this creative collaboration a lot and we know mick will continue to enjoy the fans for many years to come. What do you think of the outcome of this story?
